

We all know:

A clean stable is paramount for animal health. We all know, dirty air and surface are wearing out humans and animals. However, cleaning the stable environment takes a lot of time and energy. Which are limitedly available in current intensive livestock farming practices.

Animal Life Plus has tackled this challenge, providing farmers cleaner stables and saving time and energy as well.

How does it work:

Nature has perpetual self-cleaning properties. This is achieved by the working together of different microbiological organisms in a proper balanced way. Animal Life Plus has translated nature's cleaning principle to your stable.

ALP microbalance provides you with a permanently well maintained stable environment. It's fully automated, making it even better for workers, animals and the outside environment.

What does Animal Life Plus?

ALP provides a total concept for 24/7 continuous stable cleaning. The program is suitable for every type of stable, existing and newly built. Our innovative, efficient way of working has many advantages for the farmer, the animals and the environment.

Our proprietary microbiological cleaning products and cleaning automation system form together a one button press system. And includes a bi-annual service contract.

1

Starter:

For thorough floor and slatted floor cleaning.

2

Cleaner:

For cleaning of the barn walls and barn.

3

Spray 3+:

For the automated spraying system in favour of continuous barn cleaning.

4

Shampoo:

For washing animals, in particular the sows.

The unique concept of Animal Life Plus

Our innovative, fully automated and integrated way of working is serving the sustainability by the use of renewable raw materials and microbiological components.

We were able to develop this long-term solution after years of laboratory and applied research, working intensively with your most valuable research partners: The farmers.

User experiences

- Less NH₃ build up
- Low levels of dust, including small particular matter (PM₁₀)
- Easy to use
- Well maintained and clean stable
- Better production results
- More pleasant working environment

Our products contain 100% natural microorganisms that fully digest organic waste.
